Exam : **C1000-173**

Title : IBM Cloud Pak for Data V4.7 Architect

Version : DEMO

1.In which situation would you specifically label nodes for DB2 workloads?

A. When node differentiation is unnecessary

B. To distinguish between different data or workload types

C. When all nodes are utilized for identical tasks

D. For reducing overall system performance

Answer: B

2.What are the key benefits of utilizing Watson Pipelines in data processing? (Select two)

A. Automated data transformation

B. Manual data entry minimization

C. Reduction in network latency

D. Real-time data processing

Answer: AD

3.Which Cloud Pak for Data predefined role has permission to create service instances?

A. Data Steward

B. Data Engineer

C. Data Scientist

D. Reporting Administrator

Answer: B

4.What is a critical aspect of monitoring DB2 services to enable efficient user querying?

A. Ignoring query performance metrics

B. Disabling user access to monitoring tools

C. Providing insights into query execution and performance

D. Ensuring that only DB administrators can monitor the system

Answer: C

5.How does data replication facilitate multi-site data distribution?

A. By limiting data access to a single location

B. By ensuring data is available across different geographical locations

C. By increasing the complexity of data management

D. By increasing the complexity of data management

Answer: B
